

How to give an effective online presentation

1. Start with momentum

The beginning and ending are super important

“Observers take as little as 5 seconds to determine whether a person is charismatic or not!”

2. Simplify your slides

Avoid technical hassles by designing simple, easy-to-read slides.

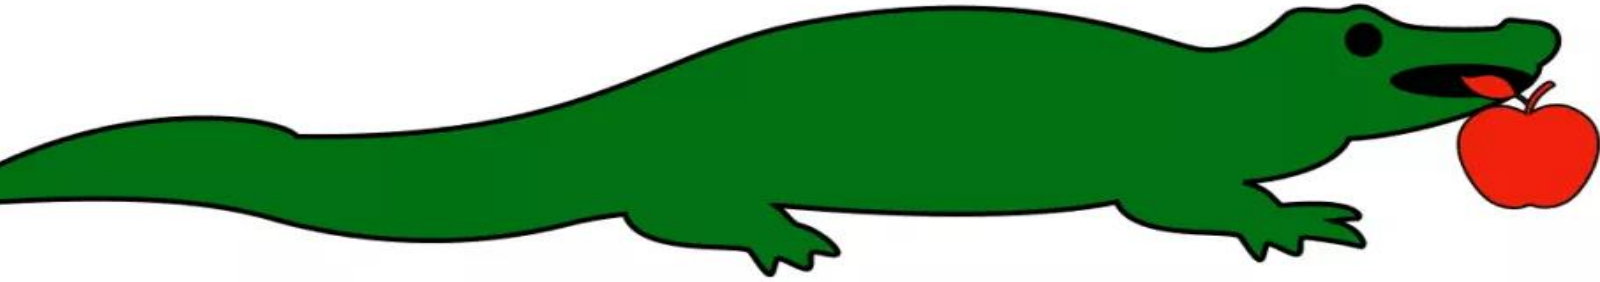

Place text in the center instead of at the edges of the slides because they may not display correctly on your audience's screens.

Give your key messages quickly - use a sentence headline for your slide titles that states the main point of your slide.

Use “Keynote” to prepare the slides if you have a Mac.

“Alligators don’t only eat meat; they eat fruit, too!”

When you add pictures, always consider the following:

- Does my visual help the main point of the slide?
- Is my visual appropriate for the audience?
- Is my visual too distracting?
- Does my visual help the audience understand complex information better?
- If a video, is it too long or short?

3. Use visuals

Find visuals
from:

- unsplash.com
- pixabay.com
- pexels.com

5. Do tech prep

- Anything can go wrong, will go wrong! Focus on what you can control!
- ALWAYS double- or triple-check your equipment beforehand.
- Make sure your microphone, webcam, and internet is working.
- Use the most reliable internet connection you can.
- Have another laptop (or emergency tablet or phone) at the ready in case you encounter a problem.
- Download a PDF version of your presentation to pull up in case there's a technical mishap with your slides.
- Keep a copy of the slides with all the members of the group.
- Close any unnecessary applications to ensure that they don't interfere your web conferencing software.
- Get familiar with the platform you're using in advance.

6. Set the scene

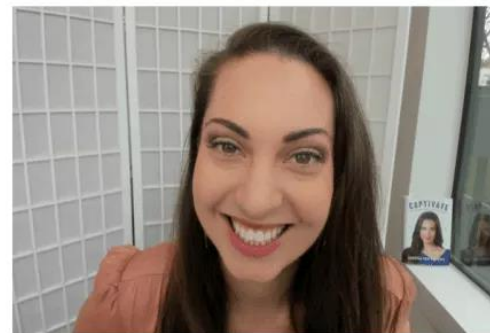

- An ideal background is a plain wall to eliminate distractions and look professional.
- If you can't tidy up your space, you can also create a sophisticated virtual background.

7. Ditch the
sweatshirt or
other at-home
apparel

- Dress in formal attire

8. Show your face

- Show your face
- Set up a desk lamp behind your laptop, centered right over the camera to light up your face.
- Show your gestures
- keep your back straight throughout the presentation.
- Keep standing if you can

9. Make sure they can hear you and only you

- Present in a quiet room
- Silence your phone
- Turn off desktop notifications
- Get rid of loud fan noises
- Try using “Krisp” software to eliminate distracting noises.

10. Look them in the eye

Raise your laptop so that your camera is at eye level

Practice speaking to the camera, not the screen.

Make sure you are centered in the frame, and your head is not cut off.

Do not sit too close to your laptop, your face may look blown up.

Ideally, it would help if you sat at an arm's length from the screen

11. Regularly re-engage your audience's attention

- Spread out your points over more slides
- Pick up the pace
- Ask a direct or rhetorical question
- Solicit feedback or comments
- Use engaging images here and there
- Tell an anecdote that illustrates your point
- Provide an example or two to explain a point
- Show a brief video clip that ties into your message.

12. Be happy

People can hear your mood from
your voice

13. Practice

- Practice using screen recording.

When going over your video recordings, take careful consideration of the following:

- Do I use too many/not enough hand gestures?
- Is my body language unnatural or distracting?
- Do I sound loud and confident enough?
- Do I have any technical issues?
- Am I under the time limit or going over?

Guidelines for Mid- evaluation

- Number of slides – 10-15
- Time – 10-15 minutes
- Number the slides
- The last slide should contain the details of the group members (Name and student ID)
